

robota

one solution for sterilization

Turnkey solution for the entire handling process.
The operator simply inserts the trays with the used
irons and collects them wrapped and sterilized.
Can be installed in small spaces without complex plant
engineering works.

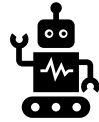

The machine is equipped with all the equipment needed for the handling and packaging process without the need for operator supervision. The system fully **automates** the process through:

Washing, ultrasound and drying

Demonstrated effectiveness on cements and encrustations

Robotic arm

Handling of all instruments, including small parts

Automatic enveloper

From the single instrument, to the complete tray or the implant kit

Handpiece treatment

Washing, disinfection and lubrication of the handpieces

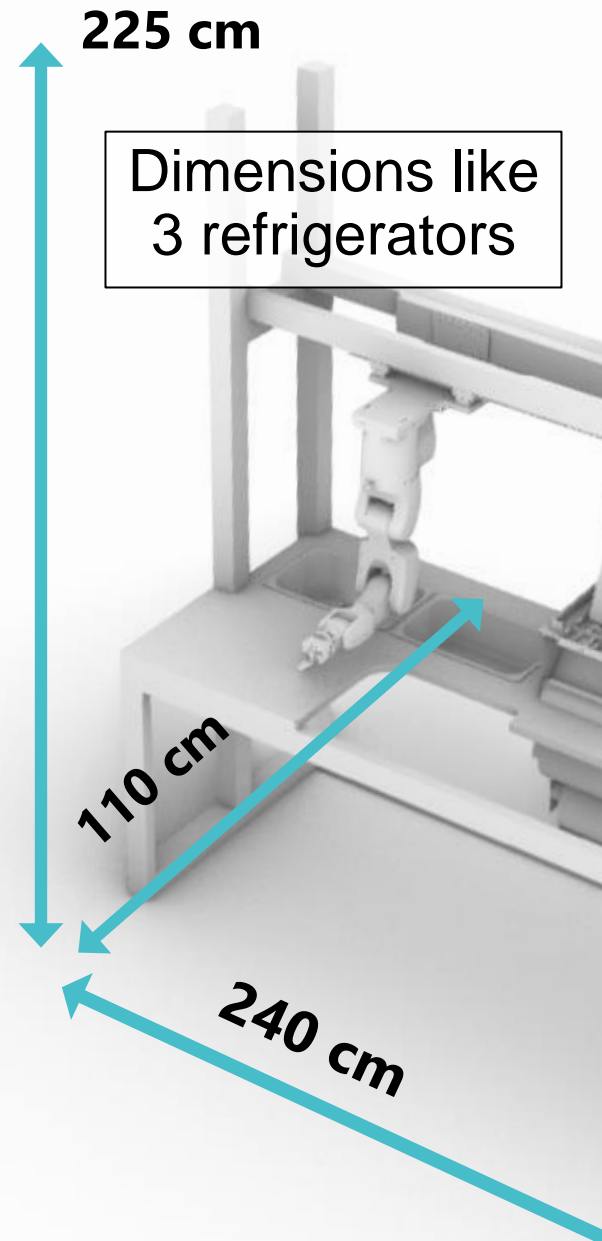

Autoclave

Rational and optimized use in compliance with regulations

Traceability of the whole process

Collection of all process data, which can be simply inserted into a digital folder

The system is designed to solve **clinical** needs
whit an **intuitive user interface**

Simple use and management

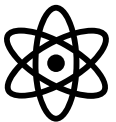

Fast return on investment

Reduction of waste of materials and utilities

Labor reduction for non-clinical operations

Maximum safety for staff and patients

Single use disposal

Video of the operating system can be viewed online by clicking on the following icons:

Video demo

Gripper change

Trays management

Possibility of live demo in presence or video call
